1: The data is based on published figures or engineering development simulations and may vary due to factors such as weather, road conditions, battery charge, payload, tire conditions, etc. It is for reference only. Acceleration time with rollout subtracted.

2: The maximum vehicle output power is 6.6kW, the actual external output depends on the maximum power of the external discharge gun.

3: The vehicle comes with magnetic suction points and expandable magnetic accessories are genuine car products.

4: The seat material only refers to the main part of the seat that comes into contact with the passenger's body.
